

FROM STADIUMS TO SCHOOLS WE'RE ADVANCING SPORTS SURFACES

Australian made quality sports and recreational surfaces

APT ADVANCED
POLYMER
TECHNOLOGY

APT Asia Pacific is the world's leading manufacturer of synthetic turf, acrylic coatings and polyurethane-based materials for sporting and recreational applications. APT makes artificial surfaces for world-class Olympic stadiums, community sporting clubs, schools, backyards and everything in between!

Their award-winning manufacturing plant located in Melbourne, is the largest sports and recreational manufacturing facility in the southern hemisphere. Plus they are the only synthetic turf manufacturer in Australia to make their own yarn.

With many schools in Australia and New Zealand already enjoying the quality and performance of our surfaces, perhaps it's time to introduce their Australian made, ISO-certified quality surfaces into your school?

Australian Made Quality

APT is the only synthetic turf manufacturer to make yarn in Australia. Their yarns have inbuilt proprietary features not found in any other yarns and include up to 24 unique components to produce a stable and long-lasting formulation. This makes their synthetic turfs more durable, UV resistant and safer to play on.

- APT is the only synthetic turf manufacturer in Australia with quality certified by the International Standards Organisation (AS/NZS ISO 9001:2015)
- Their SYNLawm (landscaping), Laykold (tennis), Poligras (hockey), Rekortan (athletics) and Ligaturf (fields) products are all awarded with the Australian Made certification.

Environmental Sustainability

With a strong commitment to environmental sustainability, APT products are made with renewable resources and their systems are comprised of both renewable and recycled materials. Key innovations include:

- Poligras Tokyo GT hockey turf was the first hockey turf made from renewable resources. It was designed for the Tokyo Olympics and is comprised of 60% PE made from sugar cane. This technology is also used in APT's SYNLawm Classic GT landscape product.
- Laykold Masters Gel is a cushioned acrylic hardcourt system that is based on more than 60% renewable resources. The unique polyurethane coating system uses natural oils, not crude oil, to form the cushioning layer.

Market-Leading Products

APT surfaces have been played on at some of the world's biggest sporting events from the Sydney Olympics to the US Open, and these exact elite-quality surfaces are made available to schools to nurture the next generation of sport stars.

Because APT manufacture their own products to the highest standards, they back their products with market-leading warranties of up to 15 years (depending on the product).

The APT Asia Pacific guarantee gives customers the peace of mind that their investment will last for years to come.

Established in 2007, Easy Turf has 15 years' experience in the synthetic turf industry, with particular expertise in school installation projects.

Easy Turf recognises the importance of providing the best possible playing, sport and recreation areas for students, and therefore only install premium Australian made turf manufactured by APT Asia Pacific.

Easy Turf aims to offer exceptional customer service, deliver every project to exceed expectations, and maintain relationships with customers well beyond the completion of the project. They invest time and money into every employee to ensure that they are equipped with the highest industry and product knowledge, skills and expertise to successfully deliver every project. They value the importance of relationships, so take a collaborative approach with their customers by promoting flexibility, transparency and communication. Easy Turf also makes safety a priority and ensures a safe working environment. They adhere to strict OH&S guidelines, with all installers holding relevant licenses and valid Working with Children checks.

Maintenance services

Easy Turf offers a variety of maintenance programs for schools and sporting clubs to ensure their surfaces achieve maximum longevity and performance. Their programs are designed to suit different budgets and surface types. Their maintenance services include:

- Surface de-compacting and debris removal
- Filtration of infill
- Turf grooming and brush up
- Weed control
- Algae and moss treatment (if required)
- Minor and major repairs
- Maintenance reporting
- End-of-life turf replacement

Gisborne, Victoria

Before

After

Easy Turf, in collaboration with VSBA (Victorian School Building Authority), completed an amazing makeover for New Gisborne Primary School in Victoria. The school had a large oval with natural grass which was difficult for students to play on when it was muddy and slippery in winter and dusty and dry in summer.

After several consultations with the VSBA and the school, Easy Turf installed a new synthetic football field with several line markings for multipurpose use, an athletic track complete with a long jump pit, and a large recreational space with four square courts.

The full project included the excavation, demolition and removal of the existing site, followed by the installation of concrete spoon drainage, new turf, and new fixtures including AFL goal posts, soccer goals, and sand pit with cover. A total of 4865m² of Ligaturf HB 250 was installed for the football field, with a further 3300m² of Supergrasse Court PE installed for the 4-lane running track and recreational zone with four square courts.

Like many projects completed over the past two years, Covid hampered the delivery of the project, however, Easy Turf worked over weekends to ensure the project was completed on schedule. The team were also extremely careful not to remove or damage any of the existing large trees that lined the boundary of the concrete spoon drainage.

Today, the students and staff of New Gisborne Primary School can safely enjoy their new vibrant sport and recreation space all year round.

“Our school was very fortunate to have Easy Turf do our oval redevelopment – over 8000sqm in total! They constantly went above and beyond expectation and continually impressed us with their knowledge, experience and professionalism. Easy Turf was meticulous with their work and the end result is quite stunning.”

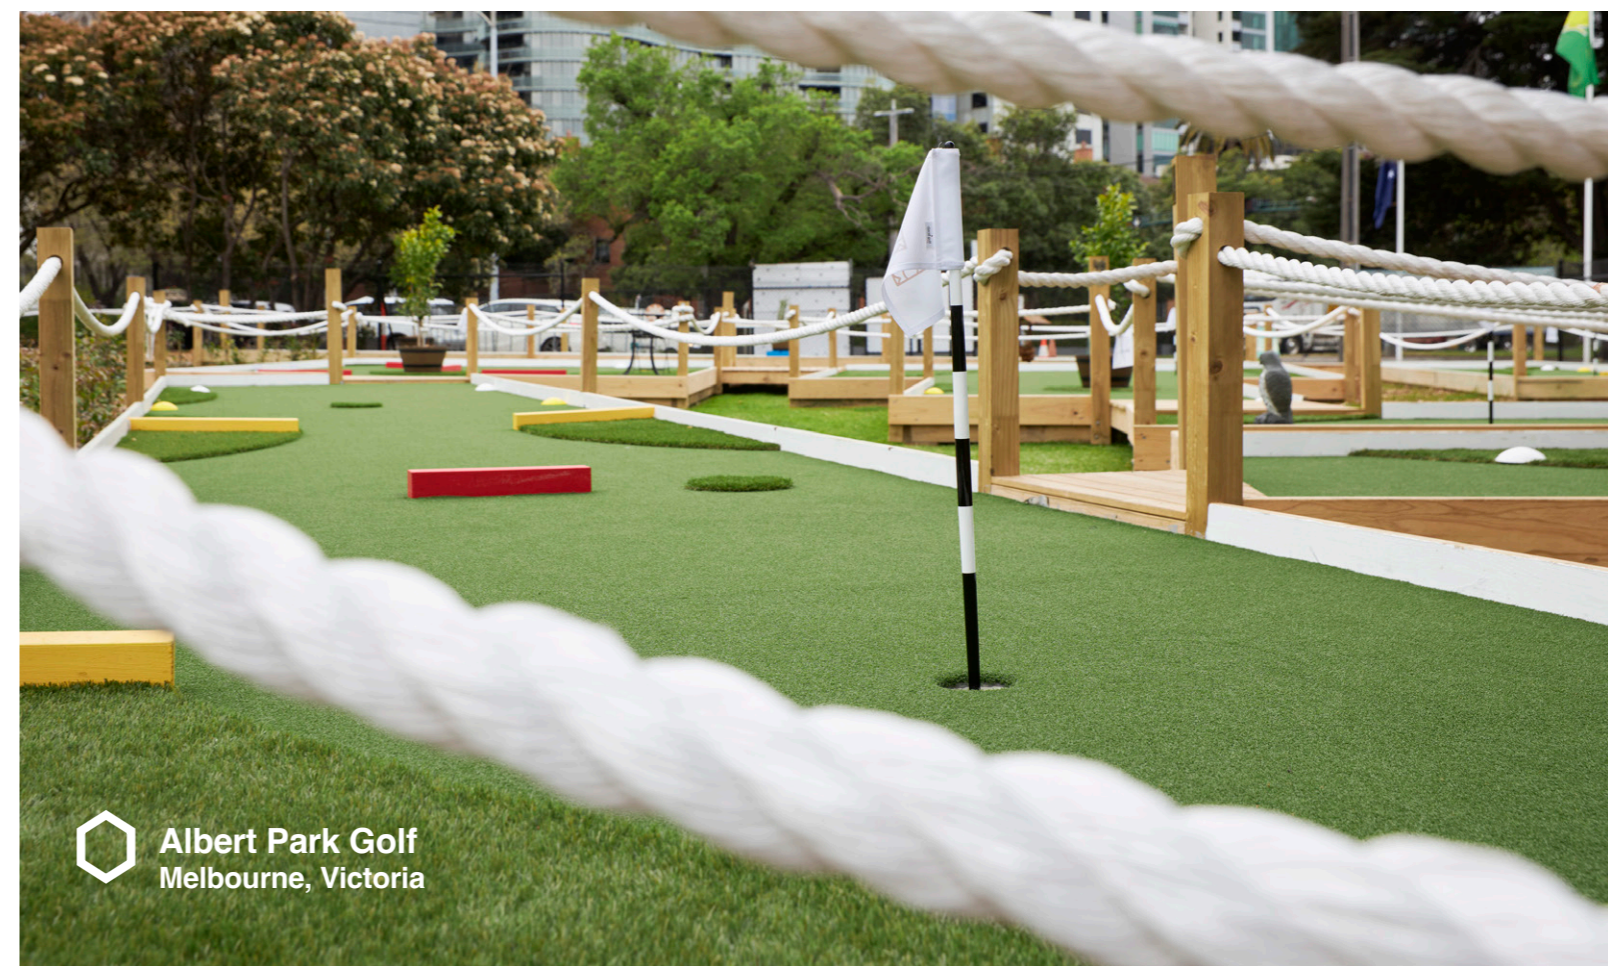

Andy Kozak – Principal, New Gisborne Primary School
